

Dr. Theodoros Karnavas holds a BSc. in Biology from the National University of Athens and a Ph.D in Medicine from University of Ioannina, Medical School. He did his Ph.D thesis in the international biomedical sciences research center (BSRC) “Alexander Fleming”, in Athens in the field of stem cell biology and early mammalian embryo development. After his Ph.D he has been awarded a European Marie Curie ITN fellowship to work as a post-doctoral research scientist at San Raffaele Medical School, Milan, Italy. His main scientific focus during his Marie Curie fellowship was the molecular mechanisms of cell reprogramming. He has been a post-doctoral research scientist in cancer genetics at Columbia University Medical School for two years (2016-2018). Now, he is a post-doctoral fellow at NYU Langone Medical Center and a research fellow of Institute of Life in Athens.
